

The global business network for motorsport

MIA School of Race Engineering

Date – 3rd-4th November and 10th-11th November 2018

Location – Silverstone Wing, Sahara Force India and Cranfield Simulation

As an expert in your field, the MIA would be honoured if you would consider becoming a Tutor for this year's School of Race Engineering.

The school has been designed to cover a comprehensive range of engineering topics to give students an insight into the skills required to be a race engineer, whilst developing their understanding in each area. The tutors will be real world experts, such as yourself and by sharing your experience the students will be exposed to a whole new dimension of teaching.

We plan for the School to conclude with an interactive simulator session at Cranfield University where the students can practice everything they have learnt throughout the course.

Objectives

- A focused and interactive course
- Taught by real world experts
- Develop Race Engineers that have theoretical and practical skills and knowledge
- Address the skills gap from University to real world industry

Benefits

- Promote your team or brand to future engineers
- Advertise your latest jobs – to a pool of enthusiastic and ambitious engineers
- Brand awareness via brand association with School of Race Engineering and comprehensive marketing plan
- Expenses covered

If this is something that you would like to be involved with, please contact the Course Leaders:
